

Enhance Your Appearance.

It's Still You, Only Better.

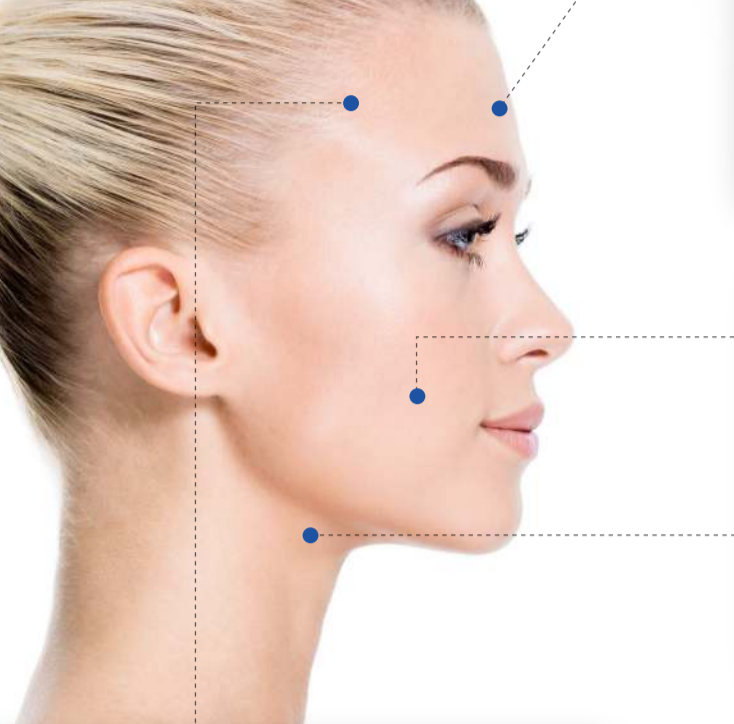

Aging is a normal and inevitable part of life—both in years and in looks. That said, the last thing you want to see when you look in the mirror are frown lines, sunspots, and droopy eyelids aging your face.

At our MedSpa, we offer a whole spectrum of treatments to fit everyone's budget and desired downtime, not to mention organic treatment options to choose from.

Below are our favorite ways to treat the problem areas that are a real pain in the you-know-what.

PROBLEM AREA Skin Texture

Problem Area: Scarring

Treatment Options:

- [Profractional Laser Treatment](#) resurfaces the skin, creating micro-injuries to the tissue to promote collagen production and decrease the appearance of scars. [See how it's done.](#)
- [Microneedling](#) promotes the body's natural healing process, removing and reducing the appearance of facial scarring. This may require a series of treatments, depending on the severity of the scar. [See how it's done.](#)

Problem Area: Facial Redness

Treatment Options:

- [BBL/ IPL](#) targets facial redness caused by rosacea, acne, and similar conditions. Pulsed light reduces redness and brightens skin tone, typically requiring a series of three treatments and annual maintenance.
- [Hydrifacials](#) reduce redness by cleansing, exfoliating, removing impurities, and restoring nutrients. There's no recovery period and patients see instant results. [See how it's done.](#)

Problem Area: Skin Texture

Treatment Options:

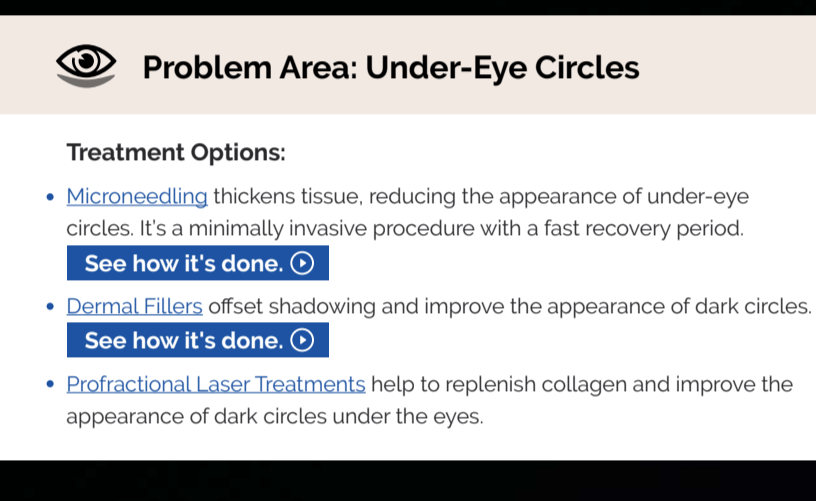

- [PRP Facial Rejuvenation](#) improves overall skin texture, plumps hollowing areas, and decreases wrinkles. Patients typically see results in 3-6 months. [See how it's done.](#)
- [Microneedling](#) increases collagen production and improve skin texture, filling in wrinkles and fine lines for a firmer, smoother look. Some patients see instant results; others require more time or multiple sessions. [See how it's done.](#)
- [NanoLaser Peel](#) removes the superficial layer of skin to improve texture, pore size, and fine lines. It also stimulates collagen production. Results gradually improve over time.
- [Profractional Laser Treatments](#) improve skin texture by stimulating collagen production to smooth out fine lines and wrinkles.
- [Chemical Peels](#) are a resurfacing method to improve the skin's texture and overall appearance, typically requiring three treatments and ongoing maintenance. [See how it's done.](#)

Problem Area: Sunspots & Dark Spots

Treatment Options:

- [BBL/ IPL](#) is a noninvasive light laser treatment that stimulates collagen production and reduces melanin, which is responsible for freckles, age, and sunspots. [See how it's done.](#)
- [MicroLaser Peel](#) is a full-face laser treatment that reduces the appearance of spots. Patients see noticeable benefits within a few days. Treatments can be one-time or recurring, depending on each patient's unique needs. [See how it's done.](#)
- [Chemical Peels](#) are a less invasive resurfacing option than BBL. These peels help brighten the skin by treating it both superficially and underneath the surface. To achieve ideal results, chemical peels are typically done as a series of three treatments with annual maintenance. [See how it's done.](#)

PROBLEM AREA Facial Features

Problem Area: Under-Eye Circles

Treatment Options:

- [Microneedling](#) thickens tissue, reducing the appearance of under-eye circles. It's a minimally invasive procedure with a fast recovery period. [See how it's done.](#)
- [Dermal Fillers](#) offset shadowing and improve the appearance of dark circles. [See how it's done.](#)
- [Profractional Laser Treatments](#) help to replenish collagen and improve the appearance of dark circles under the eyes.

Problem Area: Thin Lips

Treatment Option:

- [Dermal Fillers](#) enhance the volume of naturally thin lips or lips that are thinning due to age. Results are seen immediately, improve gradually, and last 6-12 months. [See how it's done.](#)

Problem Area: Double Chin

Treatment Option:

- [Kybella](#) is the first injection for treating submental fat or "double chin." It's injected into the tissue beneath the skin to destroy fat cells. Results are permanent.

Problem Area: Droopy Ears

Treatment Options:

- [Surgical Earlobe Revision](#) improves the appearance of drooping ears. Recovery from this surgical procedure typically lasts three days.
- [Dermal Fillers](#) plump and tighten the earlobe to eliminate the "droopy" look. They're minimally invasive, with fast recovery and results. [See how it's done.](#)

PROBLEM AREA Hair

Problem Area: Hair Loss

Treatment Option:

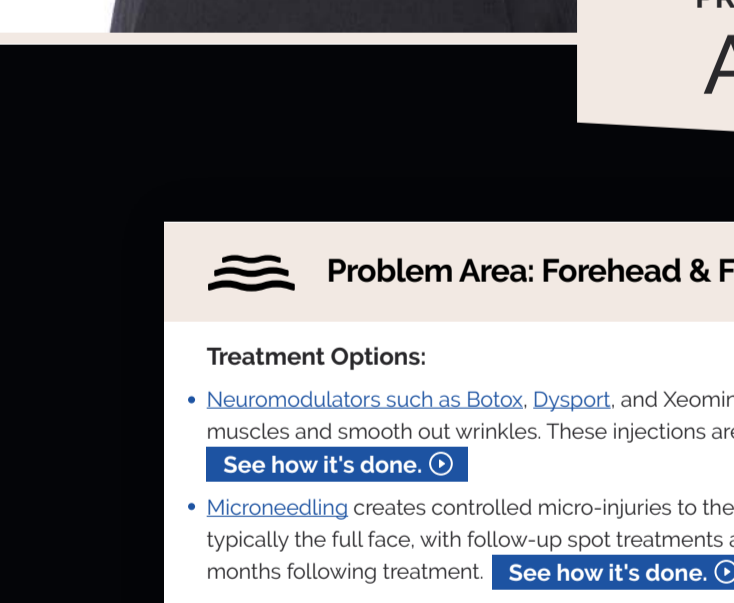

- [PRP Injections](#) are made from platelet rich plasma in the blood to treat hair loss by helping to stimulate growth.

Problem Area: Unwanted Hair

Treatment Option:

- [Laser Hair Removal](#) is a series of laser treatments to help permanently remove unwanted hair. It typically requires 6-8 treatments to see ideal, lasting results. [See how it's done.](#)

PROBLEM AREA Aging

Problem Area: Forehead & Frown Line Wrinkles

Treatment Options:

- [Neuromodulators such as Botox, Dysport,](#) and Xeomin are injections of Clostridium botulinum, which helps relax facial muscles and smooth out wrinkles. These injections are quick, minimally invasive, and typically achieve results in 2-10 days. [See how it's done.](#)
- [Microneedling](#) creates controlled micro-injuries to the skin in order to produce collagen and elastin. The first treatment is typically the full face, with follow-up spot treatments as needed. Patients see results anywhere from a week to a few months following treatment. [See how it's done.](#)
- [Profractional Laser Treatments](#) are organic solutions that use a laser to help stimulate collagen production and smooth out wrinkles. Many patients combine these treatments with [Botox](#) or [fillers](#) to achieve short- and long-term results.

Problem Area: Droopy Eyelids

Treatment Options:

- [Blepharoplasty](#) is a surgical procedure for rejuvenating the upper and/or lower eyelids. The surgeon removes excess skin, drooping muscles, and displaced fatty tissue. Results typically last several years, depending on habits such as tanning and smoking. Recovery time is 2-4 weeks.
- [Botox Brow Lifts](#) are neuromodulator injections targeted in the brow area that help lift eyelids and improve their "droopy" appearance. Treatment is minimally invasive, with very little downtime and few potential side effects.
- [Microneedling](#) produces collagen and tightens the skin around the eyelids, typically requiring multiple sessions to achieve optimal results. [See how it's done.](#)
- [Dermal Fillers](#) lift and tighten the skin around the eyelids. Results typically last up to 18 months, depending on home care. [See how it's done.](#)

Problem Area: Sagging Skin

Treatment Options:

- [Microneedling](#) produces collagen and elastin, which help to smooth and tighten sagging skin. [See how it's done.](#)
- [Dermal Fillers](#) are injectable gels in the jawline and mid-face that help lift and tighten sagging skin. Collagen plumps up the skin and filler will temporarily address sagging. Results last 6-18 months, depending on the filler used. [See how it's done.](#)
- [PRP Facial Rejuvenation](#) organically stimulates collagen production to reduce fine lines and wrinkles. This process also plumps areas that have lost volume. Most patients notice results within 1-6 months. [See how it's done.](#)

Problem Area: Sagging Jawline

Treatment Option:

- [Dermal Fillers](#) strengthen the jawline and improve sagging. They're minimally invasive, with fast results and recovery. [See how it's done.](#)

A final thought:

Please keep in mind that not everyone is a good candidate for the treatments we offer.

For example, pregnancy, underlying medical issues, and certain oral medications can all impact how your body responds. Therefore, it is best to meet with one of our nationally certified providers to learn more about the treatment that is best for you.

Schedule an appointment for a complimentary skin analysis at NOVA Plastic Surgery to learn more about the range of treatments we offer at our med spa.
